PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 3 years 11 months of professional experience designing and delivering production web applications using React.js, React 19, Next.js, TypeScript, Node.js, Express.js and NestJS. Experienced in end-to-end frontend architecture, feature-based application design, reusable component systems, centralized API layers, Redux Toolkit state management, authentication, RBAC and frontend testing. Also experienced in backend API development, database optimization, Redis caching, production troubleshooting and application performance optimization. Demonstrated technical leadership through architecture ownership, regular code reviews, mentoring two junior developers and production incident resolution. Designed an AI-orchestrated feature-delivery workflow used across 30+ Jira tickets, integrating requirements analysis, design inspection, codebase analysis and automated Playwright acceptance testing.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL
Frontend Engineering: React.js, React 19, Next.js (SSR, SSG, ISR), Vite, Redux Toolkit, feature-based architecture, reusable components, custom hooks, design systems, Material UI, Tailwind CSS, Bootstrap, Syncfusion UI, HTML5, CSS3, Sass, accessibility
Frontend Architecture & Performance: Centralized API/service layers, state management, authentication, RBAC, form architecture and validation, centralized error handling, React rendering optimization, React.memo, useMemo, useCallback, code splitting, lazy loading, bundle optimization
Backend and APIs: Node.js, Express.js, NestJS, REST APIs, GraphQL, JWT, API security and validation, Mongoose, TypeORM
Databases and Messaging: MongoDB, aggregation pipelines, query optimization, PostgreSQL, MySQL, Redis caching, Apache Kafka
Architecture and Integrations: Microservices, BPMN/state-machine integrations, CASL, AWS S3, AWS QuickSight, Swagger/OpenAPI
Testing and Quality: Test-Driven Development (TDD), Vitest, React Testing Library, Playwright E2E testing, frontend testing architecture, Storybook, ESLint, AST-Grep
Cloud, DevOps and Operations: Docker, AWS deployment, Nginx, automated deployment, production debugging, monitoring and logging
AI and Developer Tools: Claude Code, Antigravity, Cursor, OpenAI Codex, Ollama, MCP integrations, Graphify, Git, GitHub, GitLab, Bitbucket, Postman, Jira, Figma

PROFESSIONAL EXPERIENCE

Qloron Technology Pvt. Ltd. **Dec 2022 – Oct 2026**
Senior MERN Stack Developer *India*

- Designed and delivered application modules across React.js and Next.js frontends and Node.js, Express.js and NestJS services, translating business requirements into frontend workflows, backend integrations and data models.
- Owned implementation of enterprise workflows involving reusable components, custom hooks, Redux Toolkit state management, authentication, role-based authorization and API integrations.
- Improved application loading time by approximately 20% by implementing Brotli compression with Gzip fallback for application assets.
- Investigated and resolved production issues, taking ownership of troubleshooting, identifying root causes and implementing corrective fixes.
- Implemented backend APIs, API validation and security, Redis caching, MongoDB aggregation pipelines, database schema changes and SQL query operations.
- Conducted regular pull-request reviews and provided technical feedback on implementation quality, maintainability and engineering standards.
- Formally mentored two junior developers, providing technical guidance and supporting their development practices and code quality.
- Worked within engineering teams of 7–10 developers and collaborated with UI/UX, QA, backend and product stakeholders through Agile delivery cycles.
- Supported application deployment and operations using Docker, AWS, Nginx, automated deployment, monitoring and logging.

FEATURED PROJECT

Procalyx – Enterprise Quote & Purchase Order Management **2026**

React 19, TypeScript, Vite, Redux Toolkit, Material UI, Tailwind CSS

- Architected and developed the frontend application end-to-end for enterprise Quote Management and Purchase Order Management workflows.
- Designed a scalable, feature-based architecture to separate business modules and support maintainable feature development.
- Established reusable shared components, custom hooks and common abstractions to reduce duplicated UI logic and improve consistency across modules.
- Designed centralized API/service layers to standardize backend communication and implemented Redux Toolkit for application-level state management.
- Implemented authentication and RBAC integrations, centralized error handling, and reusable form architecture and validation patterns for business workflows.
- Established design-system and theme architecture using Material UI, selected for its simplicity, customization flexibility and suitability for evolving requirements.
- Applied frontend performance optimizations and established frontend testing practices using Vitest and React Testing Library.
- Translated Figma designs and business requirements into responsive interfaces in collaboration with backend engineers and product stakeholders.

AI-ORCHESTRATED ENGINEERING AUTOMATION

`/ship-feature` **– AI-Orchestrated Feature Delivery** **30+ Jira Tickets**

Jira MCP, Figma MCP, Graphify, Swagger/OpenAPI, Playwright, AST-Grep

- Designed a custom AI-orchestrated feature-delivery command connecting Jira requirements, design specifications, codebase analysis, implementation planning and automated acceptance testing.
- Integrated Atlassian Jira MCP to retrieve ticket details and acceptance criteria, and Figma MCP to inspect supplied design nodes and UI specifications.
- Used Graphify-based codebase analysis and Swagger/OpenAPI contract discovery to identify relevant modules, dependencies and API expectations.
- Automated Playwright end-to-end test generation from acceptance criteria, covering user journeys, edge cases and persona-based RBAC scenarios.
- Implemented a Red/Green validation workflow: generated tests before implementation to verify expected failures, followed by iterative implementation and validation until required tests passed.
- Added pre-ship checks using TypeScript, targeted ESLint, AST-Grep and persona-based Playwright testing, with acceptance-criteria-level video evidence and ticket-specific ship reports.
- Used across 30+ Jira tickets; estimated to save 10–20 minutes per ticket and up to approximately 25 minutes for larger feature changes, while helping identify defects earlier and reduce the risk of QA rework.

SELECTED PROJECTS

BLR Compass Auditing App | Node.js, Express.js, Kafka, BPMN Microservices **2024**

- Led backend development for an auditing application using Node.js and Express.js, integrating Kafka with Java-based state-machine and BPMN microservices.
- Integrated AWS QuickSight APIs for analytics and connected application workflows with state-machine services to support BPMN-driven audits.

Crizac | TypeScript, NestJS, Mongoose, MongoDB, JWT, AWS S3 **2023**

- Contributed to a multi-party overseas-education recruitment platform connecting students, universities, agents and recruitment partners across tenant, sub-tenant, user, university and application modules.
- Implemented sign-up, login, password reset and forgot-password flows, with email notifications for account verification and password workflows.

Ministry of Social Housing, Oman | React.js, Redux, Axios, react-i18next **2023**

- Led frontend development of Ministry and user portals alongside a consultancy dashboard, implementing dynamic forms and responsive interfaces.
- Implemented Arabic and multilingual support using react-i18next and contributed to SH07, SH02 and SH03 workflows for constructors, building applicants and social-aid applicants.

Orbit E-commerce | MERN Stack, Redux Toolkit, Material UI, Tailwind CSS **2022**

- Developed an e-commerce application with separate admin, merchant and user panels, integrating CRUD APIs and data-grid interfaces using Syncfusion UI and Redux Toolkit.

EDUCATION

Dr. Akhilesh Das Gupta Institute of Technology and Management **2017 – 2021**

Bachelor of Technology, Mechanical and Automation Engineering | 75.6% *New Delhi, India*
